

Procedures for Tsunami Evacuation in Tanjung Benoa

The following procedures have been agreed upon between representatives from Tanjung Benoa and adjacent hotels to facilitate temporary evacuation before and during tsunami events in southern Bali:

1. Get prepared - long before something happens

- Study the evacuation plan and get familiar with the evacuation procedures
- Discuss procedures within your family and neighborhood
- Participate in drills and information events

2. If you feel an earthquake - protect yourself

- Don't panic!
- Drop, cover and hold!

3. After an earthquake, be aware that a tsunami may follow

- Don't wait for an official warning. Leave the beach immediately as a measure of precaution!
- Prepare yourself for an imminent evacuation!
- Listen to the radio for further information and pay attention to the siren!

4. The sound of the siren is the official call for evacuation

- When the siren sounds, go directly to the hotel that has been assigned as shelter area for your Banjar
- Hotel staff will be ready to receive people from the Banjar assigned to the hotel
- Follow the instructions of hotel staff – they will guide you to the shelter areas

After the first tsunami wave, more waves are likely to come!

Wait for an "All Clear" message before leaving shelter

Pay attention to natural warning signs

- If the water retreats quicker and further than during normal tides, a tsunami is imminent to strike
- A strong wind or a roaring sound may be observed prior to the arrival of tsunami waves

If you observe any of these signs, look for shelter immediately!

Get familiar with safety rules for earthquakes and tsunamis.

For further information please contact the Lurah office or the local SIBAT Team.
